On Apr 16, 2002 this sequence version replaced gi:17933036.
Genes were predicted from the integrated results of the following:
GRNSCANI.0, BLASTNZ.0, BLASTNZ.0 as well as SplicePredictor
(October 1998 version). The genomic sequence was searched against
NCBI Nonredundant Protein datebase, nr
(ftp://ncbi.nlm.nth.gov/blast/db) and the CDNA sequence database at
KGP. Protein homologies of the coding regions were searched against
NCBI Nonredundant Protein datebases with BLASTPS.0. ESTS represent
the identified CDNA sequences using BLASTN 2.0 with the
corresponding DDBJ accession no. and RGP clone ID.
A gene with identity or significant homology to a protein is
classified based on the protein name to indicate the homology level
such as same name, 'putative-' and '-like protein'. A gene without
significant homology to any protein the indensition program
'unknown' protein. A gene predicted with a gene prediction program
'unknown' protein. A gene predicted with a gene prediction program
significant as a 'hypothetical' protein.
The orientation of the sequence is from SP6 to 77 of the PAC clone.
This sequence of P0446B05 clone has an overlap with P0406G08
(DDBJ:APD01340) clone at the position 1 to 17,095 of 5' end and
with H0005410 (DDBJ:APD0412) at the position 98,039 to 149,145 of
3' end. Detailed information of this entry is available at

NOTE: This is a "working draft" sequence. It currently
consists of 59 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
                                                                                                               Submitted (18-MAY-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 133255) Worley, K.C.

NOTE: This is a "working draft' sequence. It currently consists of 63 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary, Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

It currently consists of 10 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Sequence 28, Application US/08961527

Patent No. 6420135

Patent No. 6420135

Patent No. 6420135

Patent INPERMATION:

APPLICANT: Charles Kunsch

TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences NUMBER OF SEQUENCE: 391

CORRESPONDENCE ADDRESS:

ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    COMPUTER READBLE FORM:
MEDIUM TYPE: Diskette, 3.50 inch, 1.4Mb storage COMPUTER: HP Vectra 486/33
OPERATING SYSTEM: MSDOS Version 6.2
SOFTWARE: ASCII Text
